SUMMARY

Data Scientist in Time-Series Forecasting, Operations Research, and Generative AI. Built a Cognitive Supply Chain Twin (Prophet, OR-Tools, LangChain) boosting productivity by 10-15%+. Shipped production systems: multi-agent SRE (80%+), deepfake detection (93.4%+), and a churn predictor with SHAP.

EDUCATION

B.Tech CSE (Artificial Intelligence)

Nov 2022 – May 2026

PBR Visvodaya Institute of Technology and Science

- **CGPA:** 8.0/10.0

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

AI/ML & DL: Tensorflow, Google OR Tools, Scikit-learn, Pandas, Numpy, XGBoost, LightGBM, SHAP, Time Series Forecasting, EfficientNet-B4

LLMs & Agents: LangGraph, LangChain, Groq API (Llama 3.1 8B, Llama 3.3 70B), Ollama(mistral)

Data Visualization: Tableau, Matplotlib, seaborn

Web Frameworks: FastAPI, Flask

Databases: PostgreSQL, Redis

DevOps & Cloud: Streamlit, CI/CD, Vercel, Render

Other Tools: CUDA, Git, Jupyter Notebook,

PROJECTS

SynergyOS – Cognitive Supply Chain Twin

LightGBM, Google OR-Tools, LangChain, Ollama, Streamlit
GitHub *Live Demo*

- Engineered a hybrid time-series forecasting pipeline (Prophet + LightGBM) achieving hyper-local demand sensing across 5+ warehouses with a 4-week prediction horizon, enabling proactive inventory planning.
- Designed a multi-objective inventory optimization engine using Google OR-Tools (Linear Programming) that minimizes holding, stockout, and transfer costs simultaneously across the entire supply chain network.
- Built a GenAI Co-Pilot with LangChain + Ollama (Mistral 7B) converting complex optimization outputs into 1-line actionable alerts, reducing manager decision time by 80%.
- Integrated real-time Weather API data as external features to enhance demand forecasting accuracy, deployed the full-stack application via FastAPI + Streamlit dashboard

Bank Customer Churn Predictor

XGBoost, Scikit-learn, Streamlit, SHAP

GitHub

Live Demo

- Developed an XGBoost classification model on 50,000+ customer records, handling class imbalance with SMOTE and achieving 0.89 AUC-ROC for early churn risk identification.
- Integrated SHAP (SHapley Additive exPlanations) to provide transparent, feature-level explanations for each prediction, building trust with business stakeholders.
- Deployed a live interactive Streamlit web app with real-time prediction and SHAP force plots, containerized with Docker and hosted on AWS/Streamlit Cloud.

ACHIEVEMENTS & CERTIFICATIONS

Meghaton - IIIT Hyderabad

Web Design Competition - PBR VITS
